

# Intuitics

Build R-based web apps quickly and easily

## Focus on what matters

Save time by turning your analytics models into web apps that users can run themselves.

## Build analytics apps in minutes

Use our drag and drop builder to create an interactive web app on top of your R code in minutes.

## Deploy your app with a single click

Your app goes live with no installation, no provisioning, and no IT involvement, because Intuitics manages computing resources and ensures security.

## Empower teamwork and auditing

Users can snapshot an app and share it with colleagues. They can also turn apps into recurring reports and dashboards.

## Enjoy power and flexibility

Intuitics handles big data analytics through Oxddata's H2O. Every app can be accessed through a REST API and R dependency packages are automatically managed.
